- Pexels

## Icons:

- Fontawesome

## How to customize:

All the files and images are prepared well. You can make changes in the file according to your requirements.

Images, CSS and JS files are stored into folders classified by images, css and script names respectively in **template->assets** folder and html pages are stored in **template** folder.

### ❖ Text/Other content:

- You can edit text by replacing default text.
- Every section in html page is given name before starting and after ending of section through html comments according to that you can modify page elements.
- In assets **css->main.css** is css file for customization of html elements' style. Table of contents is provided in main.css file which will be helpful for understanding css file structure. You must have to be familiar with CSS to do modifications in element' style.
- Unnecessary customization in other css and js files which are external plugins' files may affect the structure of elements or may result in glitches.

### ❖ Images:

- You can locate an image by **src** attribute of `<img/>` html tag.
- All images are stored into **assets -> images** folder. In **images** folder images are stored in folders which are classified according to html page name. i.e. `service_single`, `project_single`, `blog_full`, `blog_article`
- All the images used in `index.html` file, are stored in folders classified according to section name in **assets -> images**. i.e. `about`, `partners`, `projects`, `team`, `news`.
- Cover and Logo images stored in **assets -> images** are used in every html file.
- You must give same name to the new image else you have to modify **img** tag. i.e. `<img src=<your image path> />`.

## Support:

IMPORTANT : All images are used for preview only and not included in the final purchase pack.
